

Square Root Parent Function: $f(x) = \sqrt{x}$

x	y
0	0
1	1
4	2
9	3

Domain: $x \in [0, \infty)$

Range: $y \in [0, \infty)$

Transformed Radical Function:

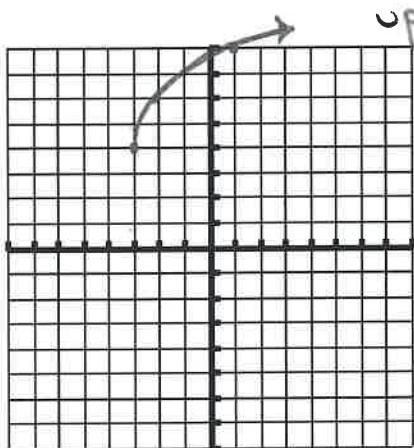

$$y = a\sqrt[n]{x-h} + k$$

vertical dilation horizontal translation vertical translation

For the following square root functions, describe the transformations from the parent function and graph. Then describe the features of the graph.

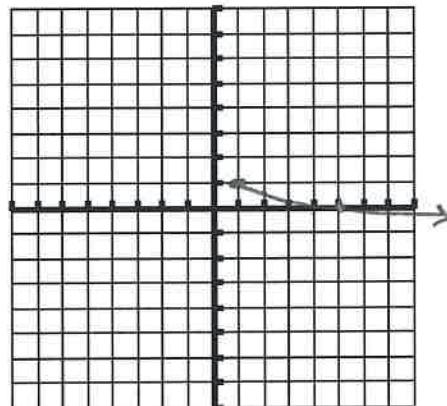

1) $g(x) = 2\sqrt{x+3} + 4$

Description:
 vertical dilation of 2
 translated left 3
 up 4

2) $m(x) = -\frac{1}{2}\sqrt{x-1} + 1$

Description: Reflected over x-axis
 VD of 1/2
 translated right 1, up 1

Domain: $x \in [-3, \infty)$

Range: $y \in [4, \infty)$

State the interval of x where $g(x)$ is increasing: $x \in [-3, \infty)$ State the interval of x where $g(x) > 0$: $x \in [-3, \infty)$

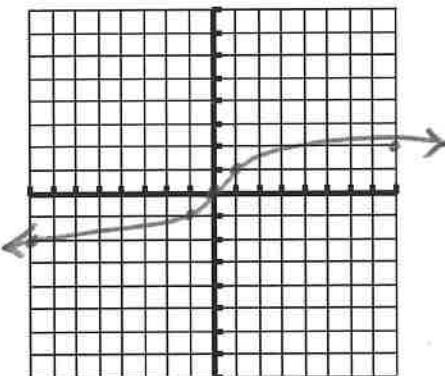

Domain: $x \in [1, \infty)$

Range: $y \in (-\infty, 1]$

State the interval of x where $m(x)$ is decreasing: $x \in [1, \infty)$ State the interval of x where $m(x) < 0$: $x \in (5, \infty)$

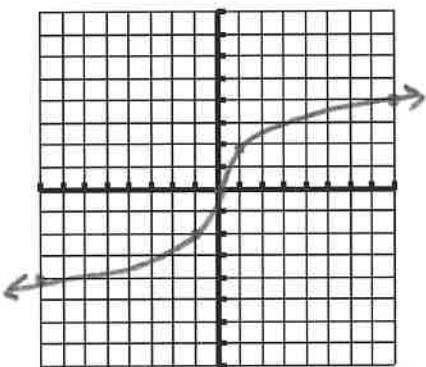

Parent Function of a Cubic Function: $f(x) = \sqrt[3]{x}$

x	y
-8	-2
-1	-1
0	0
1	1
8	2

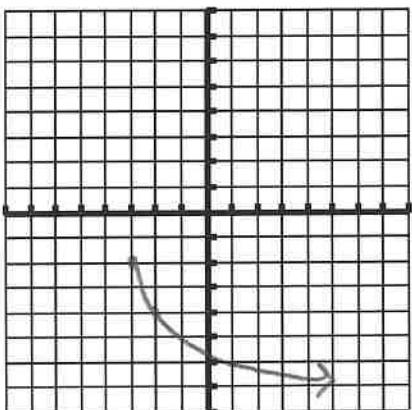

Graph: $f(x) = \sqrt[3]{8x}$

Rewrite as $f(x) = 2\sqrt[3]{x}$
 ↑
 VD of 2

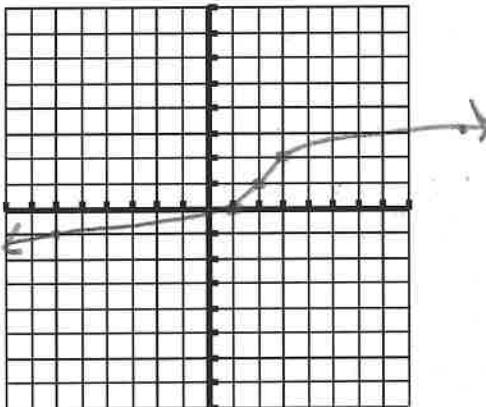

You Try!

1) $m(x) = -2\sqrt{x+3} - 2$

2) $n(x) = \sqrt[3]{x-2} + 1$

Example:

Looking out to the sea, the visibility in miles from a certain spot on a cliff can be calculated with the function

$d(x) = \sqrt{1.5x}$, where x is the height in feet above sea level.

a) What is the visibility 5 feet above sea level?

$$d(5) = \sqrt{1.5(5)} = 2.739 \text{ mi}$$

b) What is the visibility 40 feet above sea level?

$$d(40) = \sqrt{1.5(40)} = 7.746 \text{ mi}$$
